Introducing the Mitsubishi STAR Lineup of Ductless Air Conditioning and Heat Pump Units
A breakthrough in pure comfort

- Mitsubishi offers more ENERGY STAR systems than ever.
- ENERGY STAR Systems incorporate eco-comfort technology, dual and triple-allergen filtration, and whisper-quiet operation.
- New technology revolutionizes the heat pump.
- Space-saving design means easy and unobtrusive installation.

Mitsubishi offers more ENERGY STAR systems than ever, and we're the industry leader.
Mitsubishi has 15 new Energy Star rated systems with dramatic increases all the way up to 26 SEER. And we have nine new systems that qualify for a federal tax credit of up to $300.

STAR units incorporate eco-comfort technology, dual and triple-allergen filtration, and are whisper-quiet.
Eco-comfort technology makes these systems smarter in how they use energy and minimizes their impact on the environment. Plus there are many advanced features like the i-see™ Sensor, that automatically detects room temperature differences and adjusts for greater comfort. Mitsubishi Electric's advanced multi-stage filtration systems dramatically reduce allergens and help eliminate odors. And our indoor units operate with sound levels starting as low as 19dBA. That sound is even quieter than a human whisper.

New technology revolutionizes the heat pump.
Unlike older, inefficient heat pumps, there is no cold air delivery with Mitsubishi Electric's HVAC systems. Larger coils heat faster, and the Hot Start™ system doesn't activate the fan until the desired temperature is reached so it never blows cold air. What's more, select models use Hyper-Heating INVERTER (H2i®) technology that operates effectively down to -13°F. With this improvement these models give true year-round comfort from a single system. Even with this amazing cold weather performance, there are no energy consuming electric resistance heating elements to increase your utility bills.

These units provide easy installation, simple service and longer warranties.
Mitsubishi Electric's units are easy to install with little or no ductwork. They're also designed for easy servicing. Although, with our industry-leading reliability record, you won't have to worry much about that. Better yet, we've extended our warranties to seven years on compressors and five years on parts.
